Emergency & Evacuation Plan

■ IN AN EMERGENCY — CALL 911 ■

Table of Contents

This Emergency and Evacuation Plan has been prepared for **Santa Catalina Hall (SANCA)** at the ASU Polytechnic Campus by The Polytechnic School, Ira A. Fulton Schools of Engineering. It outlines the procedures, responsibilities and contacts necessary to ensure the safe and orderly evacuation of all building occupants in the event of an emergency. All faculty, staff, students and visitors are required to familiarise themselves with this plan, know the designated evacuation routes, and understand their individual responsibilities.

Section	Description	Page
Building Information	Location, address and key building details for SANCA.	2
Emergency Contacts	On-campus emergency numbers including ASU Police and Mesa Fire Department.	2
Building Occupant Responsibilities	Roles and responsibilities of all faculty, staff, students and visitors.	2
Automated External Defibrillators (AED)	AED locations within the building and guidance on use during evacuation.	2
Evacuation Procedure	Step-by-step instructions for safely evacuating the building when an alarm sounds.	3
Assembly Areas, Primary & Alternate	Designated outdoor locations where occupants must gather after evacuating.	4
Re-Entry Procedure	Guidelines on when and how building occupants may safely re-enter the building.	4
Persons with Disabilities	Evacuation options and assistance protocols for occupants with disabilities.	5
Designated Areas of Refuge	Safe waiting areas for persons who cannot use stairways during an evacuation.	6
Mobility Impaired Escorts	Roles and responsibilities of designated escorts for mobility-impaired occupants.	6
Training	Requirements for emergency training and participation in annual evacuation drills.	7
Emergency Code Word	The designated code word to discreetly alert colleagues to contact emergency services.	7
Active Shooter Situation	University resources and the "Run. Hide. Fight." protocol for violent threat situations.	7

Emergency Notification System	How ASU delivers emergency alerts via text, email and the LiveSafe app.	7
Important Contacts List	Complete list of ASU departments, local emergency services and nearby hospitals.	8
Classroom Emergency Procedures	Instructor guidelines for reviewing emergency procedures with students each semester.	9

■ **This plan must be reviewed annually by all building occupants.** For questions or to report safety concerns contact ASU Environmental Health & Safety: **(480) 965-1823 | EHS@asu.edu | ehs.asu.edu**

Emergency & Evacuation Plan — Page 2

BUILDING INFORMATION

Building Name	Santa Catalina Hall
Abbreviation	SANCA
Address	7271 E. Sonoran Arroyo Mall, Mesa, AZ 85212
Campus	ASU Polytechnic Campus
School	The Polytechnic School — Ira A. Fulton Schools of Engineering
Document Year	2024

EMERGENCY CONTACTS

Contact	Phone Number
On Campus Emergencies	911
ASU Police Department Non-Emergency	480-727-3456
Mesa Fire Department Non-Emergency	480-644-2101
ASU Environmental Health & Safety	480-965-1823

BUILDING OCCUPANT RESPONSIBILITIES

An effective emergency response requires the cooperation of **all** building occupants including faculty, staff, students and visitors. As a member of The Polytechnic School, it is your responsibility to:

- Become familiar with the building layout, all safety devices, pull stations, fire extinguishers, AEDs and egress routes
- Know the building's primary and alternate evacuation routes and assembly areas at all times
- Participate in all scheduled emergency drills and training sessions each academic year
- Orient students with emergency evacuation procedures on the first day of each class
- Assist visitors to evacuate safely and report any issues to the floor marshal
- Never prop open fire doors or obstruct emergency exits at any time
- Report all safety concerns or hazards to ASU Environmental Health & Safety immediately

AUTOMATED EXTERNAL DEFIBRILLATORS (AED)

AEDs are life-saving devices that deliver an electric shock to restore a normal heart rhythm during sudden cardiac arrest. AEDs are installed within the building. Trained employees hold CPR, First-Aid and AED certification. During an evacuation, the AED should be removed from its location and carried to the Assembly Area for possible emergency use.

■ Nearest AED Location: First and second floor — hallway between restrooms and elevators

If you witness someone in cardiac arrest: (1) Call 911 immediately, (2) Begin CPR, (3) Retrieve and use the AED as soon as possible, (4) Continue until emergency services arrive. AED and CPR training is available through ASU Environmental Health & Safety at (480) 965-1823.

Evacuation Procedure — Page 3

The evacuation procedure below applies to all fire alarms, emergency alerts and any situation requiring immediate evacuation of Santa Catalina Hall (SANCA). All occupants must follow these steps without exception. Failure to evacuate promptly and correctly puts lives at risk.

WHEN THE ALARM SOUNDS:

- Begin immediate evacuation — do not wait for verbal confirmation.
- Close all doors behind you to slow the spread of smoke and fire.
- If you discover smoke or fire and the alarm has not sounded, activate the nearest pull station and call 911.
- If the alarm does not work, call 911 immediately and notify all occupants verbally.
- Take only essential personal items that can be grabbed in seconds (keys, medication, wallet).
- Do not return to your office or classroom for any reason once you have begun evacuating.

■ DO NOT USE THE ELEVATORS — USE STAIRWELLS ONLY ■

When the alarm sounds, elevators automatically recall to a pre-determined floor and shut down. Persons inside may become trapped. Always evacuate via the stairwells.

FIRE RESPONSE DURING EVACUATION:

- If trained, you may attempt to extinguish a small fire no larger than a wastebasket using the nearest fire extinguisher.
- If the fire is too large or spreading rapidly, close the door and evacuate immediately — dial 911 in all cases.
- Evacuate to the nearest and safest exit keeping doors closed to slow fire and smoke spread.
- Persons with functional needs should refer to the *Emergency Evacuation for Persons with Disabilities* section.
- Evacuate to the pre-determined **Assembly Area** and report immediately to your designated floor marshal.

Hazardous equipment and processes should be shut down before evacuating unless doing so presents a greater hazard. Close all doors upon leaving the area.

FLOOR MARSHAL RESPONSIBILITIES:

Each floor has a designated Floor Marshal responsible for conducting an orderly evacuation. Floor Marshals must sweep all designated areas, confirm all occupants have evacuated, assist persons with disabilities to their designated areas of refuge, and report to emergency personnel at the assembly area. Floor Marshals receive specific training on their duties through The Polytechnic School safety programme.

EVACUATION NOTES:

Only take items of extreme importance that can be grabbed safely within seconds — car keys, house keys, medication, wallet. Do not remove large or bulky items, photographs or equipment. Never delay your evacuation for any item. Refer to your Emergency Response Guide (ERG) for further details. ERG Flip Charts are available from ASU Department of Public

Safety at (480) 965-3456.

Assembly Areas & Re-Entry Procedure — Page 4

Assembly areas are pre-determined outdoor locations where building occupants gather immediately after evacuating. At the assembly area, floor marshals conduct a headcount and communicate information about the incident. All occupants must proceed to the correct assembly area and remain there until emergency personnel provide further instructions.

Assembly Area	Location	When to Use
Primary	Lawn south of SANCA and WANER, north of Lot 42	Default assembly area for all evacuations
Alternate	Lot 10 north of SANCA and east of the UNION	Used when Primary area is inaccessible or unsafe due to fire, wind or hazard

Important: Be prepared to relocate if wind direction, fire location or other hazards make the assembly area unsafe. Always follow the direction of emergency personnel. Do not leave the assembly area without first notifying your floor marshal. Account for all members of your team and report any missing persons immediately.

RE-ENTRY PROCEDURE

■ Never re-enter a building after evacuating unless officially cleared by emergency personnel!

Once it is determined that re-entry is safe, emergency personnel will issue an official "All Clear." Emergency personnel include police, fire department and Environmental Health & Safety (EH&S). The building may require full evaluation or monitoring to confirm no hazards remain before occupants are permitted to return. This evaluation is usually performed by EH&S or their contracted services.

RE-ENTRY CHECKLIST:

- Wait for the official "All Clear" from police, fire department or EH&S; personnel only.
- Do not re-enter if you smell smoke, gas or any unusual odours even after an "All Clear" has been issued.
- Report any observed damage, spills, or hazards upon re-entry to ASU EH&S; at (480) 965-1823 immediately.
- Ensure all students and visitors in your care are accounted for before dispersing from the assembly area.
- Submit a written incident report to ASU EH&S; within 24 hours detailing time of alarm, occupant count and any issues.

AFTER THE EMERGENCY:

Following any emergency evacuation, the building coordinator must submit an incident report to ASU Environmental Health & Safety within 24 hours. The report should include the time the alarm sounded, total number of occupants evacuated, any injuries sustained, any equipment or processes shut down, and any issues encountered during the evacuation process. Contact EH&S at (480) 965-1823 or EHS@asu.edu to obtain the incident report form. All incident

reports are retained on file and used to improve future emergency preparedness.

Persons with Disabilities — Page 5

This section provides general guidelines for the evacuation of persons with disabilities. Prior planning and practice of emergency evacuation routes are essential to a safe evacuation. The person assisting should **never do more than what is being asked** by the person in need. Always ask before assisting — never assume the type or level of help required.

Disability Type	Evacuation Guidance
Mobility Impaired — Wheelchair	Stay in place or move to an Area of Refuge when the alarm sounds. If alone, phone 911 immediately with your present location and where you are headed for refuge. Emergency personnel are trained to check Areas of Refuge during rescue operations.
Mobility Impaired — No Wheelchair	May be able to negotiate stairs with minor assistance. If there is no immediate danger (no detectable smoke, fire or unusual odour), the person may choose to stay in the building and use other evacuation options until emergency personnel determine the next steps.
Hearing Impaired	Most buildings are equipped with fire alarm strobe lights to alert hearing-impaired occupants. Colleagues nearby should visually alert any hearing-impaired person of an emergency and ensure they begin evacuating immediately.
Visually Impaired	May need assistance navigating unfamiliar evacuation routes. The assistant should offer their elbow — not grab the person — and guide them through the route while verbally describing surroundings, obstacles and direction changes throughout the evacuation.
Cognitive or Other Disabilities	Provide clear, simple and calm direct instructions. Remain patient and reassuring. Do not leave a person with a cognitive disability alone at any point during an emergency. If the person becomes distressed, stay with them and call 911 for additional guidance.

FOUR BASIC EVACUATION OPTIONS FOR PERSONS WITH DISABILITIES

Option	Description
1. Horizontal Evacuation	Exit to another building or area at the same floor level using a connecting passageway or go directly outside at ground level. This is the preferred option wherever possible as it avoids the need for stairway navigation entirely.
2. Stairway Evacuation	Above ground level, use stairwells with appropriate assistance. Alert other evacuating occupants to notify the fire department of your location. Stairway enclosures are separate fire-rated structures designed to provide a safe exit pathway.

3. Stay in Place	If not in immediate danger, remain in a room with an exterior window, a working telephone and a closeable door. Call 911 and report your exact location. Emergency services will relay this to on-site personnel who will determine the necessity of evacuation.
4. Assisted Evacuation	Work with a designated Mobility Impaired Escort to safely evacuate to a Designated Area of Refuge. The escort will ensure emergency personnel are notified of your exact location so that assistance can be provided without delay.

Designated Areas of Refuge & Escorts — Page 6

Areas of Refuge are specific locations within the building where persons who are unable to use stairways can wait safely for evacuation assistance from emergency personnel. These areas are typically located in stairwell enclosures which are fire-rated structures separate from the main building. Emergency personnel are trained to check all Areas of Refuge during rescue operations. Any person waiting in an Area of Refuge should call 911 immediately to report their precise location.

Floor	Primary Area of Refuge	Alternate Area of Refuge
First Floor	Northeast corridor and stairwell	Southeast corridor and stairwell
Second Floor	Northeast corridor and stairwell	Southeast corridor and stairwell
Third Floor	Northeast corridor and stairwell	Southeast corridor and stairwell

■ If you are in an Area of Refuge, call 911 immediately and report your exact floor and location. Stay calm and wait for emergency personnel — do not attempt to use stairways unassisted.

MOBILITY IMPAIRED ESCORTS

In the event of an evacuation, two individuals will serve as Mobility Impaired Escorts for persons requiring physical assistance. Individuals volunteer as escorts at the time of evacuation due to dynamic faculty and staff schedules. All building occupants are encouraged to familiarise themselves with the escort responsibilities and Areas of Refuge before an emergency occurs so they can assist effectively if called upon.

Role	Responsibility During Evacuation
Escort 1	Accompanies the disabled person(s) to the Primary Area of Refuge. Waits at the stairwell until emergency personnel arrive. Calls 911 to report the exact floor and location. Keeps the person calm and provides any relevant medical information to responders.
Escort 2	Exits the building and proceeds immediately to the Primary Assembly Area. Notifies the Floor Marshal and emergency personnel of the exact location of the disabled person(s) and Escort 1. Provides the number of persons waiting and any known medical conditions or special requirements.

Important Note: The person being assisted must always direct the type and level of assistance they require. Escorts must never attempt to carry a person in a wheelchair down stairways unless there is an immediate and direct life-threatening danger with absolutely no other option available. Improper lifting or carrying can cause serious injury.

Training & Emergency Procedures — Page 7

TRAINING

Training is an integral part of the safety programme for The Polytechnic School. Faculty heads and supervisors are responsible for ensuring all employees read, understand and train on the Emergency and Evacuation Plan. All occupants must know their evacuation routes, assembly areas and individual responsibilities before an emergency occurs.

- All employees must participate in at least one emergency evacuation drill per academic year
- Floor Marshals receive additional dedicated training on their specific duties and responsibilities
- AED and CPR certification training is available through ASU Environmental Health & Safety
- New employees must be fully briefed on the Emergency and Evacuation Plan during onboarding
- Faculty must review emergency procedures with all students on the first class day of each semester

EMERGENCY CODE WORD

TPS Code Word:

DOCTOR WATSON

If you encounter a violent or aggressive individual and cannot safely dial 911, alert a colleague by using the code word **DOCTOR WATSON** naturally in a sentence (e.g. "Has anyone seen Doctor Watson today?"). This immediately signals your colleague to contact emergency personnel without alerting the threat.

ACTIVE SHOOTER SITUATION

In the event of an active shooter or violent threat, follow the "Run. Hide. Fight." protocol. ASU Police offers free active-shooter training for all faculty and staff across all campuses. Call **480-965-1972** to schedule an in-person session.

RUN	If there is an accessible escape path, evacuate immediately. Leave all belongings behind. Keep hands visible and prevent others from entering the danger zone.
HIDE	If evacuation is not possible, find a place to hide out of the shooter's view. Lock and barricade doors, silence all phones and remain completely quiet until help arrives.
FIGHT	As a last resort, and only when your life is in imminent danger with no other option, attempt to disrupt or incapacitate the shooter using improvised weapons and aggression.

EMERGENCY NOTIFICATION: ALERT & ADVISORY SYSTEM

The ASU Alert and Advisory System delivers critical updates via text message, email, social media and RSS feeds. All students, faculty and staff automatically receive ASU Alerts to their ASU email address. If a mobile phone number is registered with the university, SMS alerts are also sent automatically. The Polytechnic School strongly encourages all building occupants to remain enrolled and to download the ASU LiveSafe app for additional safety reporting tools.

University Classroom Emergency Procedures — Page 9

All faculty, graduate students, teaching assistants and staff must review the following emergency procedures with all class attendees during the **first class meeting of each semester**. This requirement applies to all instructional spaces within Santa Catalina Hall (SANCA) and cannot be waived. These procedures are designed to ensure all building occupants are prepared to respond safely and effectively in the event of an emergency.

AT THE START OF EACH SEMESTER, IDENTIFY AND POINT OUT:

- All primary exits and evacuation routes from the classroom
- Fire extinguisher(s) location and type within or near the classroom
- Pull stations (fire alarm activators) — primarily located near exits
- Telephone(s) or emergency phones within or immediately near the classroom
- Electrical breaker panels and emergency on/off switches (if applicable to the space)
- Emergency eyewash stations and safety showers (required for laboratory spaces)
- The designated Primary and Alternate emergency assembly areas for SANCA
- The location of the Emergency Response Guide (ERG) Flip Chart

IF YOU DISCOVER A FIRE:

- Sound the alarm manually by activating the nearest pull station if the alarm has not already sounded.
- Call 911 or ensure someone calls 911 immediately — do not assume someone else has already called.
- Only attempt to use the nearest fire extinguisher if you are trained and the fire is small enough to safely control.
- Keep yourself positioned between the exit and the fire at all times — never let fire block your escape route.
- If you cannot control the fire within seconds, close the door and evacuate the building immediately.

IF THE ALARM SOUNDS:

- Stop all classroom activities and instruction immediately.
- Secure any dangerous materials, chemicals, equipment or ongoing laboratory experiments.
- Direct and assist all students to evacuate promptly via the nearest clearly marked safe exit.
- Leave the building immediately — under no circumstances use elevators during an evacuation.
- Close all doors behind you to help slow the spread of smoke and fire throughout the building.
- Do not re-enter the building even if the alarm stops — always wait for the official "All Clear."
- Conduct a student headcount at the assembly area and report any missing persons to a floor marshal.

IF THE EMERGENCY INVOLVES AN INJURED PERSON:

- Ensure there is no continuing danger to yourself or the victim before approaching.
- Do not move the victim unless their life is in immediate danger in their current location.
- Call 911 and remain with the victim until emergency services arrive on scene.

- Provide the dispatcher with the building name (SANCA), room number and nature of the injury.
- Report the incident to your supervisor or faculty head as soon as it is safe to do so.
